RAQUEL, AGE 44. SEVERE GLABELLAR LINES. AFTER PHOTO TAKEN 30 DAYS AFTER INJECTION. Individual results may vary. Unretouched photos. The highest proportion of patients achieved treatment success (at least 2 points improvement in both the investigator and patient ratings) at Day 30. Before and after photos taken at maximum frown.

XEOMIN® is a prescription medicine that is injected into muscles and used to improve the look of moderate to severe frown lines between the eyebrows (glabellar lines) in adults for a short period of time (temporary).
